

CEN2023 Call for Short Courses

5th Conference of the Central European Network (CEN)

From Data to Knowledge. Advancing Life Sciences.

This joint conference of the Austro-Swiss Region (ROeS), the German Region (DR) and the Polish Region of the International Biometric Society (IBS) will take place in Basel, Switzerland, from 3–7 September 2023.

We are currently encouraging proposals for short courses to be submitted on topics related to the conference theme '*From Data to Knowledge. Advancing Life Sciences.*' Short courses are usually taught by one or more instructors and may be on an introductory level or may address more advanced and specialized topics. Our goal is to provide courses that will attract a diverse set of registrants, especially including students and early career researchers, and representing a range of different application areas. Short courses are held on the Sunday before the start of the conference (3 September 2023). A course can either last the full day or a half day. Short course presenters will have their travel costs (economy flight / 2nd class train) reimbursed and the registration costs waived. The CEN organizers are committed to diversity and inclusion (D&I) in the scientific program.

Please submit proposals using the online form available [here](https://www.cen2023.ch). The form is also available at the conference website www.cen2023.ch. For questions or technical problems please contact organizers@cen2023.ch. Only fully completed proposals will be considered.

Deadline: January 15, 2023

Notification of acceptance: February 15, 2023
